1. Executive Summary
2. Lead-out or Bring-in Energy Systems
3. Understanding Implosion
4. Stan Meyer Water Car
5. Comments

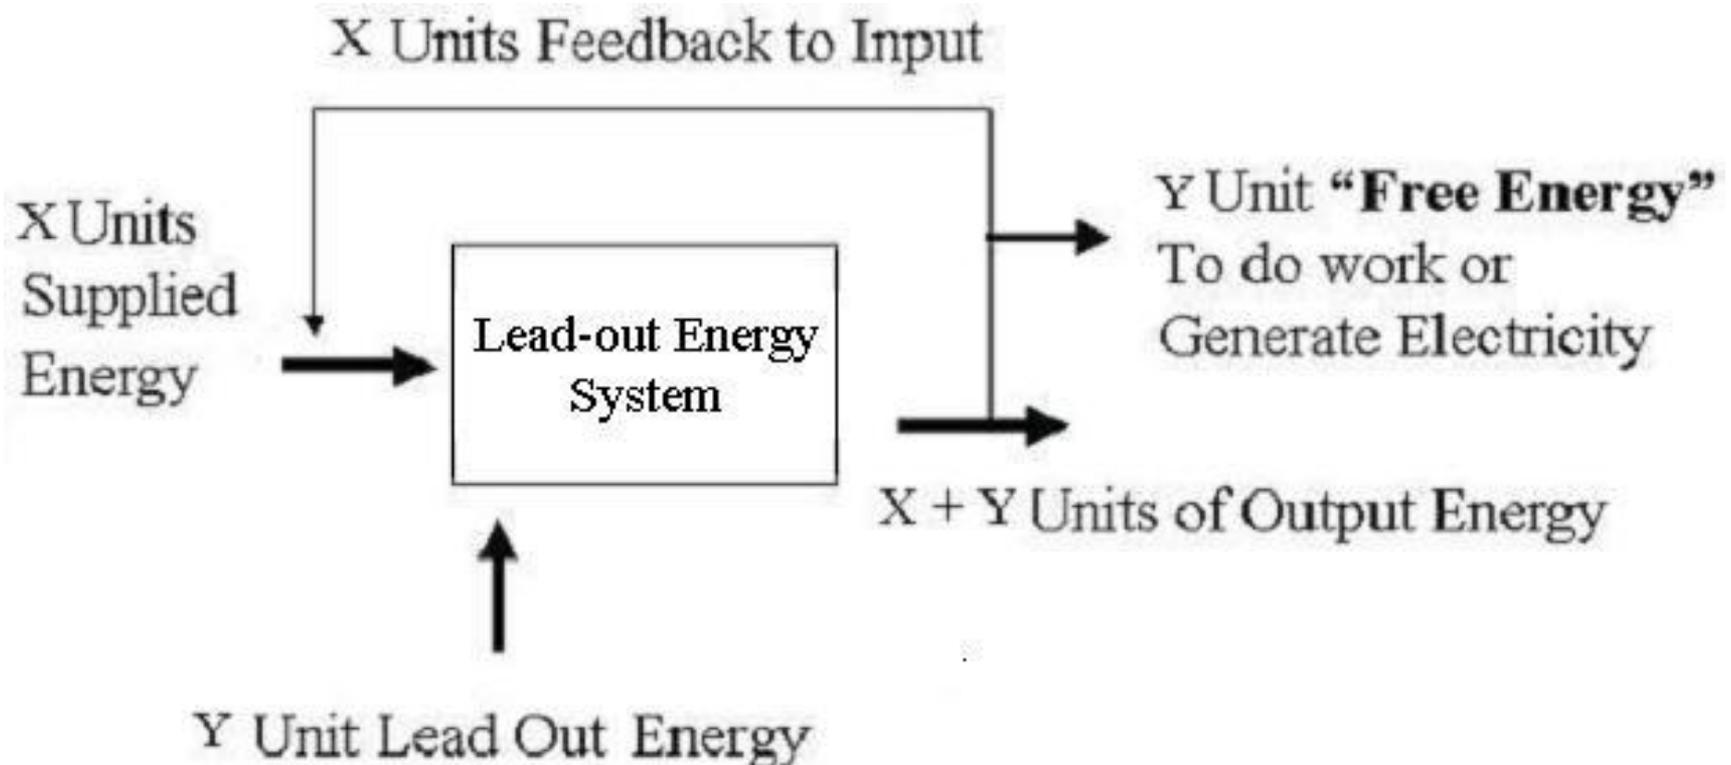

# 1. Executive Summary

- There are claims from [USA](#), [Japan](#), and latest [India](#) that:
  - Water can be “burnt” as fuel.
  - Pulse water with appropriate Electromagnetic waves.
  - Water “absorbs” such energy (= X units).
  - On “burning”, there can be **implosion** (energy from outside comes in = Y Units)
  - Such energy (X+Y units) can be used.
- **Can this be true?**

## 2. Lead-out or Bring-in Energy System

- **Lead-out or Bring-in Energy Machine is Not the Impossible Perpetual Motion Machine.**

# 3. Understanding Implosion (a)

- When Hydrogen and Oxygen Gas combine to form water:
  - The Volume of resulting water is much less than the Volume of the gases.
  - A partial vacuum is created.
- Gases from surrounding rush in to fill vacuum.
  - **Energy = Pressure(P) x Volume(V) caused by implosion**
  - **Such Energy is bring-in energy (Y units in our discussion)**
  - Power = PV x number of implosions per second

# 3. Understanding Implosion (b)

- Implosion is a property of hydrogen and oxygen gases to form water (liquid)
  - Combustion such as Carbon (solid coal) turning to carbon dioxide (gas) will NOT cause Implosion.
- Implosion volume  $V$  is constant
  - Same quantity of gases create same vacuum.
- Pressure  $P$  is external pressure
  - Usually Atmospheric
  - Can be increased via clever engineering!

# 3. Understanding Implosion (c)

- The amount of Bring-in Energy is  $PV$ .
  - Can we increase  $P$  via more gas, higher temperature?
  - Stan Meyer fed “exhaust gas” back into system.
- The rushing-in air will be colder (adiabatic expansion).
  - Kinetic energy of air molecules have been used.
  - We supply energy ( $X$ ) to create vacuum.
  - Brings-in energy ( $Y$ ) into the System.

# 4. Stan Meyer Water Car

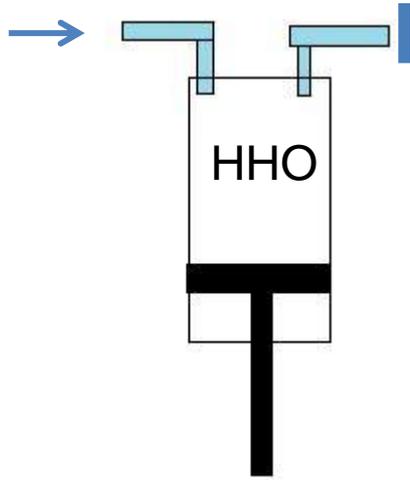

- Stan Meyer ([murdered?](#))
- [Electrolysis via pulsing and resonance?](#)
  - [Lecture on Internet](#) (different from our theory).
  - Focus was on the breakup of Hydrogen and Oxygen from water done via DC Pulsing?
    - Is it a different mechanism than Electrolysis?
- There are also much discussion on Browns Gas
  - Focus was on HHO properties and behavior.

# 5. Comments

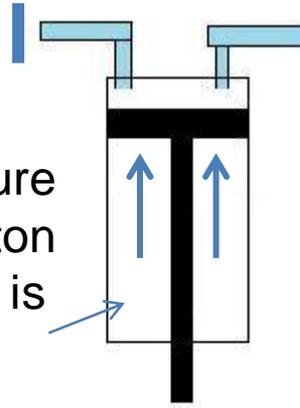

- The concept is regarded as Divine Revelation.
  - Please feel free to share, improve, circulate and implement.
  - No royalties but donations to charity encouraged.
- This file will be updated and stored at [overunityresearch.com](http://overunityresearch.com).
- Please follow or participate in discussions at [overunity.com](http://overunity.com).

# Implosion working diagrams

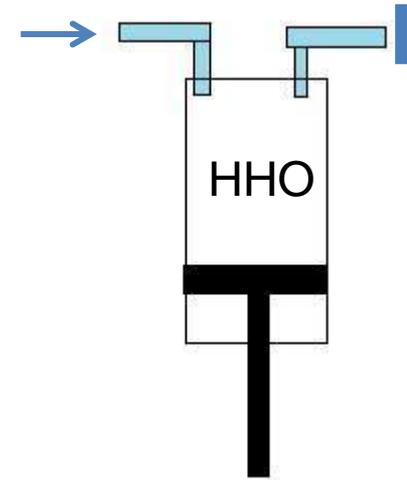

1. HHO gas goes into combustion chamber at atmospheric pressure.

Atm Pressure forcing Piston up. Energy is brought-in.

2. HHO gas ignited. Partial vacuum created. Atm Pressure pushes Piston upwards. Work done by External Atm Pressure. Exhaust valve can remain shut! Practically no exhaust gas!

3. HHO gas goes into Combustion chamber at slightly higher than Atm Pressure. Or Weight of Piston in Diagram helps.
